

Tree mold evidence of Loulu Palm (*Pritchardia* sp.) forest on the Kona Coast, Hawai'i.
Pu'uhonua o Hōnaunau National Historical Park
Deborah Woodcock

This document, created by a National Park Service (NPS) volunteer, was made possible by the Geoscientists-In-the-Parks (GIP) Program and its partners. Documents created through the GIP Program are intended to address a variety of park-identified needs including: resource management, education and outreach, interpretation, inventory and monitoring, and research. Documents are not generally peer-reviewed. Quality may vary significantly, and the product may not be finalized. Specific information may have been redacted to protect proprietary information regarding cultural or paleontological resources, and locations of threatened and endangered species.

Views and conclusions in this report are those of the authors and do not necessarily reflect the views or policies of the National Park Service, the NPS-Geologic Resources Division, and its partners. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the National Park Service.

Documents and related materials are filed with the National Park Service-Geologic Resources Division, and with Pu'uhonua o Hōnaunau National Historical Park. Contact Pu'uhonua o Hōnaunau National Historical Park for additional information.

Woodcock, Deborah, and Kalodimos, Nicholas. Tree mold evidence of Loulu Palm (*Pritchardia* sp.) forest on the Kona Coast, Hawai'i. *Pacific Science* (2005), vol. 59, no. 4:491-498.

Please be aware that products produced under the GIP Program do not authorize the collection of, or damage to park resources. The NPS specifically prohibits the damaging or collecting of natural, cultural, and archeological resources on federal lands under its regulations at 36 CFR §2.1.
