Abstract: "...Least tern (*Sterna antillarum*), a federally endangered species, and piping plover (*Charadrius melodus*), a federally threatened species, nest on Missouri River Islands. Addled eggs of both species were collected during the 1988, 1989, and 1990 nesting seasons and were analyzed for selenium and other inorganics...It is not known what impact selenium has on the eggs. However, the selenium concentrations are elevated enough, based on studies conducted with other birds, to cause embryo toxicity. Low concentrations of PCBs were present in the eggs. There are no known PCB sources in South Dakota. The females may be exposed to PCBs on the wintering grounds or during migration."
